Lehrteam: Anthony Frank, João Moreira, Shehrie Islamaj

Workshop Lectures
For our international students who are new in the masters program – and for anyone else interested – we offer this opportunitiy to get to know some of the architectural and graphical basics that will be required in the masters course. The team of assistants will introduce you to some of the standards that are needed later on in the course. Each of the assistants will then be your contact concerning the presented topic during the whole semester.
This semester the five inputs will be hold in two morning lectures and will consist of the following parts:
– Introductory lecture as a theoretical basis for common understanding
– Hands-on examples of former semester works, visits of concerned facilities and introductions of responsible people
– Discussion of the presented theory and the sighted examples and facilities
– Literature recommendations
We highly recommend these courses to all our incoming students not only in order to get familiar with our requirements, but also as an opportunity to get to know other students and our facilities.

– Architecture principles of statics
09.00 – 09.40 Anthony Frank
– Architectural principles of building physics
09.45 – 10.15 João Moreira
– Model making and model photography + image composition
10.30 – 11.30 Shehrie Islamaj
– Plan representation and layout
11.30 – 12.00 Anthony Frank
